

Introducing IRIS the biometric ID

Impossible to steal

Always with you

Keeps your ID, keys and wallet

How It Works

Welcome to the future

2s

Hemoglobin

[PASS]

Our AI recognition algorithm can differentiate between fake or manipulated vein patterns and real ones through additional security sensors.

Fully Contactless (20-30cm)

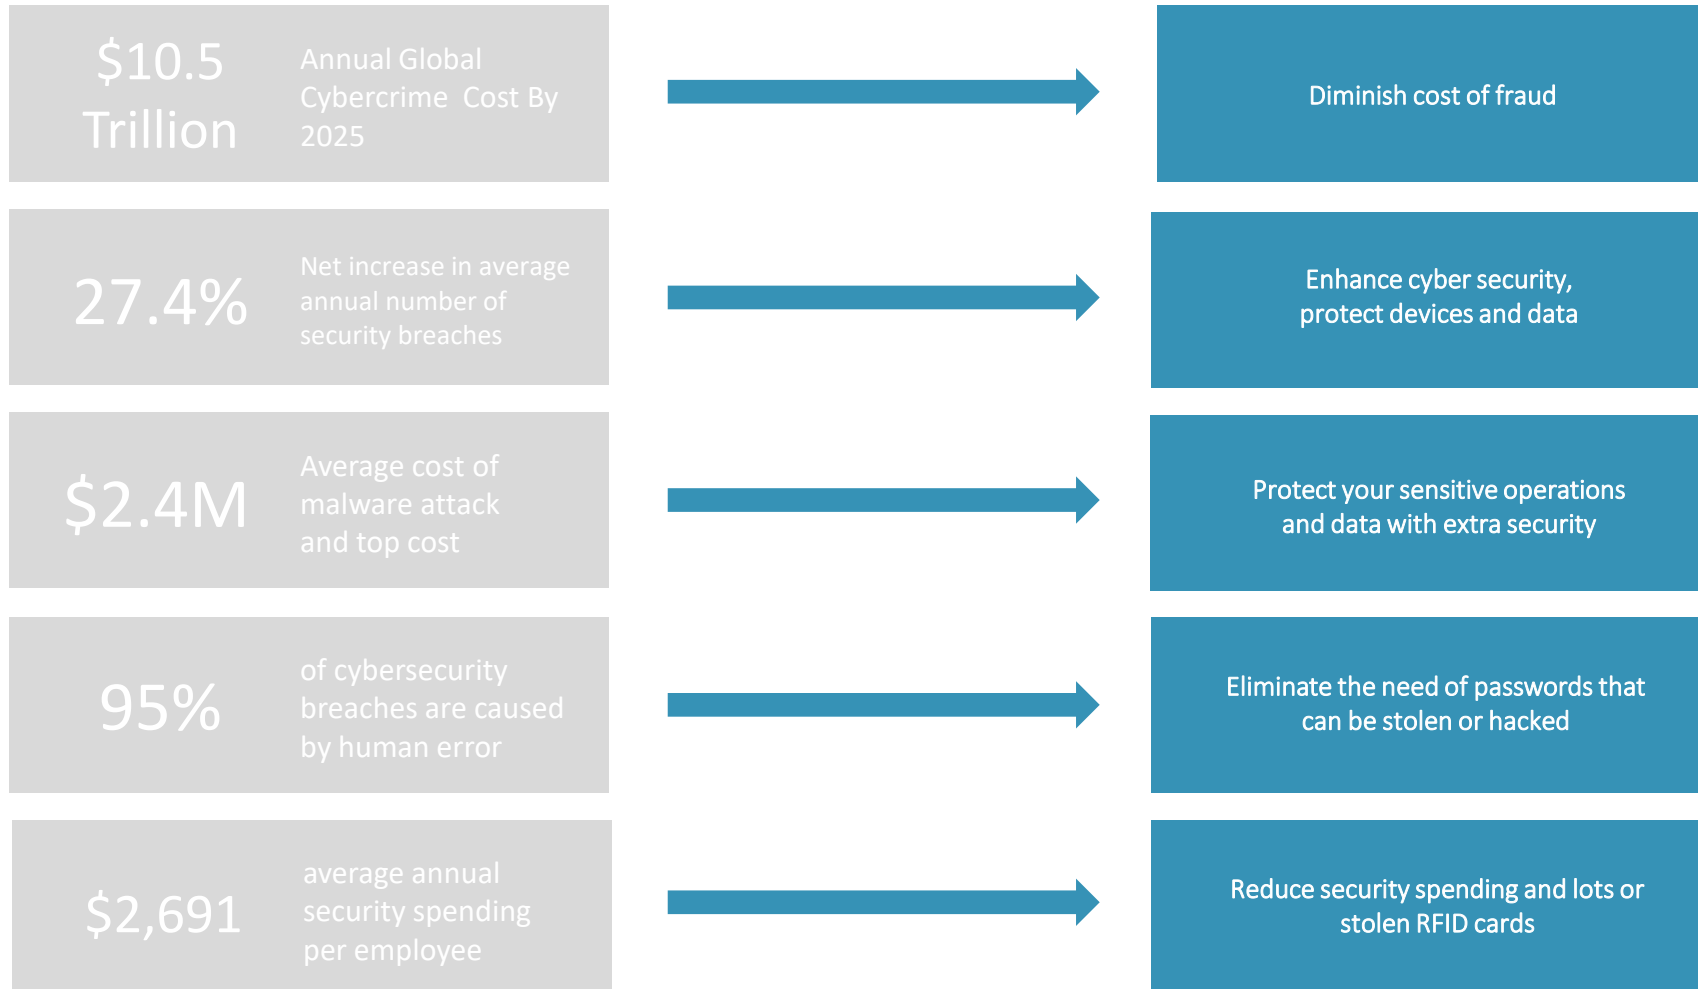

Better than the others

The superior biometric recognition technology

	ACCURACY	SECURITY	SPEED	EASE OF USE	PRIVACY	USER RESISTANCE	SIZE	COST	SCALABILITY
 iris	High	High	Fast	High	High	Low	Small	Low	High
 VEIN	High	High	Fast	High	High	Low	Small	Low	Low
 FINGER PRINT	Low	Low	Fast	Fast	Very Low	High	Small	Low	Low
 RETINA	High	Medium	Slow	Low	Medium	High	Large	High	Low
 FACE	Low	Low	Medium	Low	Low	Low	Medium	Medium	Medium

How IRIS can help you

Product Market Fit

		Current Key Market Restraints				
Product	Competitor solutions are expensive and inconvenient	Lack of easy-to-use software interface and installation	Cost	Speed	Convenience	Competitors
Market	Increasing demand and adoption for biometrics globally	COVID demand for contactless ID and temperature check	The cost of palm vein scanners and their implementation is high making it unaffordable for many clients still.	Speed issue is a major deterrent in the progress of palm vein scanner market. The processing speed of these scanners is extremely low.	The palm vein scanners do not provide long-range identification capabilities leading to decline in market progress.	
Fit	Significantly cheaper and easier to use system	Easy installation and functionality-first software	€599 Scanner Cost	2 seconds Recognition Time	Fully Contactless	IRIS

We are shaping a new market sector

An entirely new industry that is going to be huge

Biometric ID companies will be emerging and developing over the next 20 years.

We have a head start, so let's use it, and become a market leader.

ID Carriers

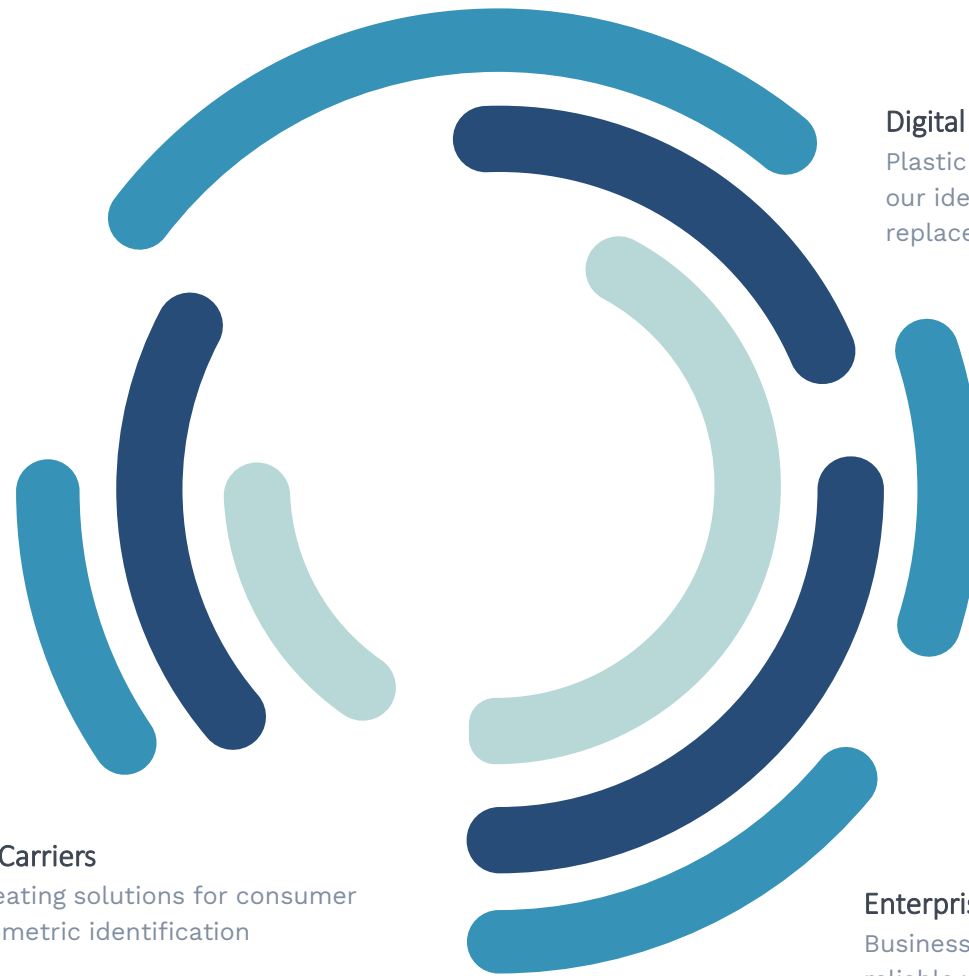

Creating solutions for consumer biometric identification

Digital Wallet Solutions

Plastic cards will no longer protect our identity and money. They will be replaced by biometrics.

Enterprise Biometrics

Businesses will demand safe and reliable ways for authentication to cut fraud losses.

So far: Our Story

We did all of this without raising any external capital

2017-2018

Concept & Planning

We came up with our concept back in 2017 when we faced identity theft in person. We planned our solution and began building our team.

2019

Proof of Concept

In 2019, we created our first sandbox vein scanner and basic recognition algorithm which validated our concept.

2020

Prototype

Then we moved onto creating a scanner prototype with a modern attractive design, as well as refining our business strategy.

2021

Product Pilot

We bootstrapped our way into creating both the hardware and software needed to have an end-to-end working pilot solution that's fully operational and sales-ready.

The background is a dark teal color. It features numerous horizontal bars of varying lengths and colors, including light blue, medium blue, and white, scattered across the surface. A faint, white wireframe globe is centered in the background, with its lines creating a subtle pattern. The word "iris" is written in a large, white, lowercase sans-serif font, positioned in the lower-left quadrant of the image.
